Sorry- not completely understood.

You mean you are leaving from home and head to Charleston at 7am?

Then you'll let us know once you get down there to assess what's going on?

> A more accurate name would be 1-(hydroxymethyl)-4-methylcyclohexane. Another synonym is 4-METHYL-1-CYCLOHEXANEMETHANOL, but it doesn't accurately describe the structure either. I suspect that is the one they meant to put out to press, but omitted the "-1-". Whoever responds, be sure to get a more correct chemical name and don't pass on the current inaccurate name being used by the media.
